FRED BALLEW d Master of I.O.O.F. Visiting

Friday, Sept. 12, in the lodge room, 400 S. Broadway, Redondo

Beach.
The Redondo Odd Fellows are celebrating the occasion by conferring the second degree on a class of candidates from throughout the 48th district.

ones or candidates from throughout the 48th district.

According to V. E. Deems secretary of Lodge 195, the Redondo lodge is growing rapidly. The
'New Regalia' fund, begun Valentine's day last year, has been
achieved and the equipment has
been ordered, he said. William
King is noble grand of the Redondo lodge.

All local Odd Fellows have
been invited to attend and meet
Grand Master Ballew, whose
home is in Stockton,

Water Problem Being Studied By Assembly Group

Water shortage in Southern California is one of the most im-portant problems of the state at this time, according to Assemportant problems of the state at this time, according to Assemblyman G. M. Anderson, 46th district, who resides in Hawthorne. Assemblyman Anderson is a member of the assembly interim committee on water pollution problems of California.

Speaking of efforts of parts of his district to overcome present water shortage problems, he said:

water shortage problems, he said:
"We all are familiar with the quarantine of most of our finest beaches as the result of sewage pollution by the city of Los Angeles. Much of my personal legislation during the past three sessions has been directed at this situation and the present progress at the Hyperion outfail plant is very encouraging to those who have been carrying this fight. This method of pollution is known as Surface Water Pollution and is something we should be hearing a great deal about in the next few montas. It will be my objective to secure the enactment of a law which would prohibit the reoccurrence of this practice anywhere in the state.
"Another type of water pollu-

state.

"Another type of water pollution affecting surface waters
is, that caused by improper
disposals of industrial wastes.
By this we are referring to practices carried on by many of our
industries such as the food processing, fish processing, distilleries, chemical plants and oil refineries,

R

fineries.

"A third type of water pollution, greatly affecting this area, especially the South Bay cities, is that resulting from salt water intrusion into our underground fresh water streams. This condition is threatening the future of many of our Southern California cities. It is obvious that we must ascertain the true facts of this problem and then act immediately.

this problem and then act mediately. "Water shortage is an obstacle c must overcome if our state to continue its growth and ke its rightful place as the tion's leader. Our cities filled the people; our metropolitate ass congested with industry; rrural communities thriving fragriculture, all must have ater in abundance. It is my befer that we shall find ourselves the near future turning to and more progressive methods reclaiming and purifying the ater that is today be in gamped in huge quantities into eccan. Instead of continuing the discrete are the state of wastthe ocean. Instead of continuing this disgraceful practice of wasting our most valuable and necessary natural resource. I predict that in the not too distant future we will find ourselves using this water over and over again for agaicultural and commercial needs. More next week on waterpollution."
